GLOBAL REAL ESTATE ALLOCATION

September 30, 2014

The global real estate allocation of your portfolio will be comprised of globally diversified publicly listed real estate securities. Physical property values tend to lag those of listed property. As real estate securities are more liquid and more frequently traded than buildings and land, they tend to reflect changes in valuation more quickly than agent and government appraisals, which in general are based on past information. So, not only are real estate securities easier to buy and sell than actual real estate, they reflect new information more quickly than the physical property market.

Real estate has a role in a well-diversified portfolio because it tends to behave as a distinct asset class to stocks and bonds. However, portfolios of Canadian real estate securities will not only be concentrated but will also tend to have a higher correlation with your physical real estate holdings based in Canada. As a result, the real estate allocation of the Global 80EQ-20FI Portfolio will be diversified across multiple countries and regions.
